

Comfortline - Ceiling Foils

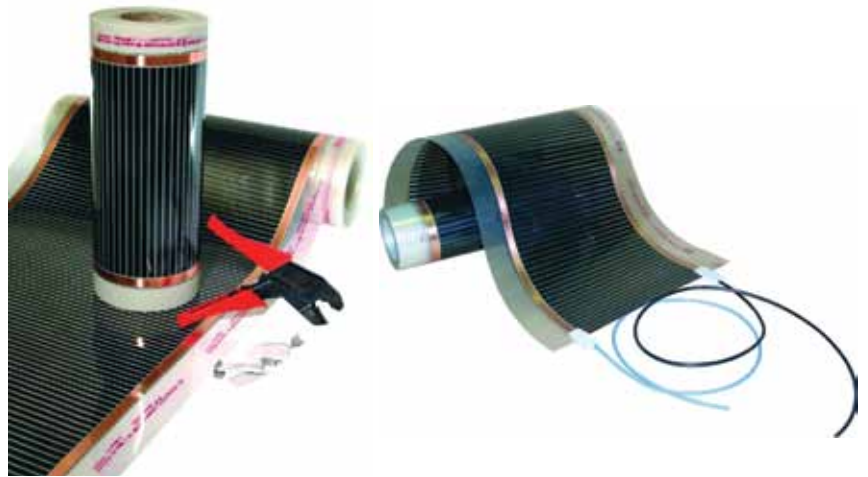

Applications

- Direct acting heating systems
- Background heating systems
- Homes, offices, nursing homes, school rooms and other rooms where radiant heating is required

Features

- Can be cut to length to suit on-site requirements
- Obstructions like down lights can be easily bypassed by connecting foils in series

COMFORTLINE®

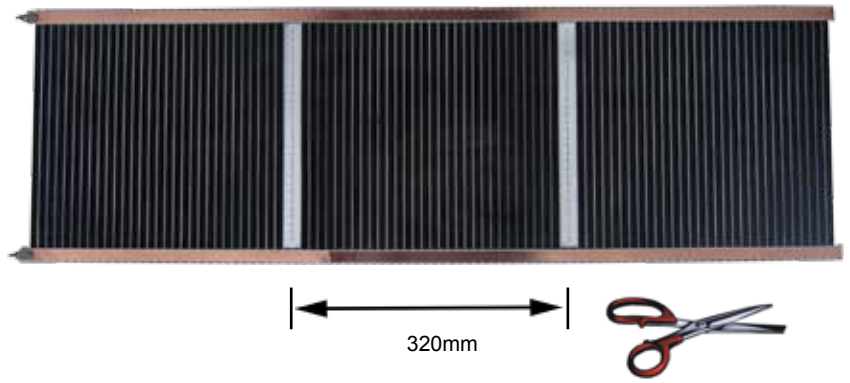

Comfortline Ceiling Foils are a radiant ceiling heating system. The foils have thin carbon heating elements sandwiched between two layers of transparent high temperature plastic laminate.

The foils are positioned to lie directly on top of a plasterboard ceiling and directly beneath bulk ceiling insulation. The bulk insulation minimizes heat loss upward, effectively heating the plasterboard ceiling and directing the heat downwards into the room below.

Comfortline - Ceiling Foils

Technical Data

- Rated Voltage: 240V
- Length of roll: 100m
- Warranty: 2 years
- Comes in module lengths of 320mm
